

LiveU's Vehicle Solutions

Extend & Enhance your Reach

Leveraging existing transmission infrastructure with new technologies for valuable new capabilities in the field

LiveU's range of vehicle-mounted solutions can be provided in different wired and wireless configurations to take into consideration when ordering your new ENG van:

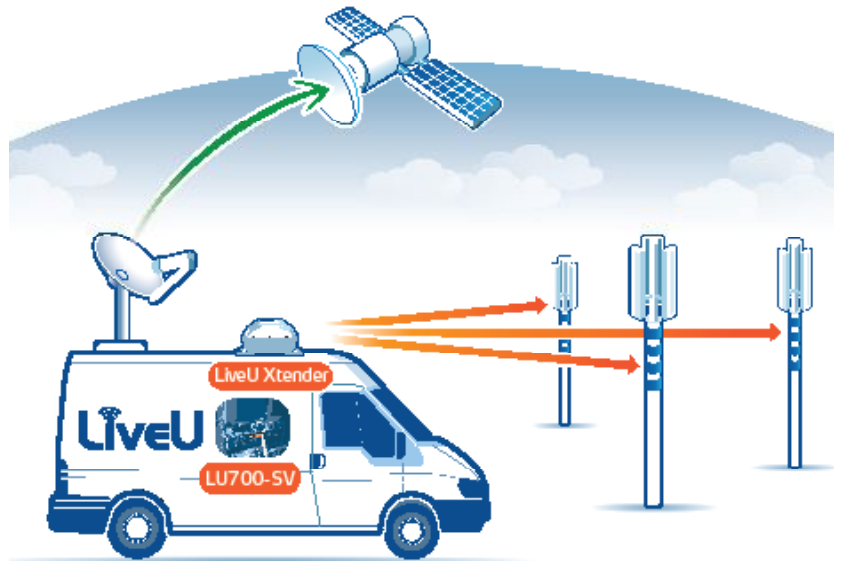

The Hybrid Classic

Contains:

- Satellite Uplink (when stationary)
- LiveU Xtender mounted on the roof of the van, including LiveU Databridge option
- LiveU LU700-SV rack mount encoder

How it Works:

- The LU700-SV connects to the LiveU Xtender and to the Satellite uplink equipment simultaneously to provide continuous transmission of high-quality encoded video regardless of network coverage
- When stationary, preference can be given to Satellite bandwidth, when moving footage can be uploaded to the studio while driving to and from the event scene
- LiveU DataBridge functionality provides the crew with a mobile hotspot for normal Internet use
- Using LiveU Central, staff back at the studio can control LiveU's units down to the last bit, freeing the crew to handle local operations

The only solution to include wireless camera-to-van capabilities

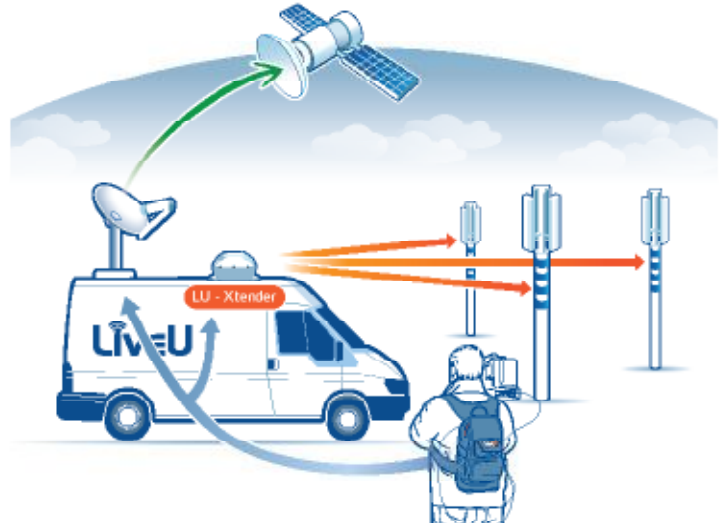

The Live-on-the-Move Truck

Contains:

- LiveU Xtender mounted on the roof of the van, including LiveU Databridge option
- LiveU LU700-SV rack mount encoder
- All-weather cameras mounted internally, on masts, or anywhere else needed

How it Works:

- The mounted cameras provide live coverage of road conditions while on the move, feeding the LU700-SV via the LiveU Xtender
- Footage can be uploaded to the studio while driving to and from the event scene
- LiveU DataBridge functionality provides the crew with a mobile hotspot for standard Internet use

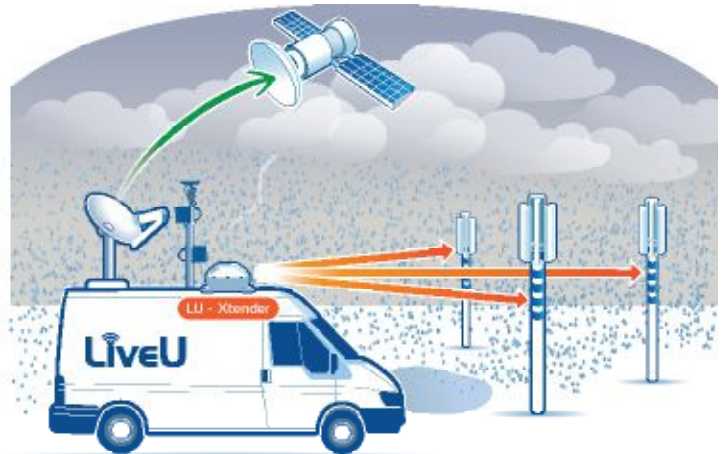

The Mini-OB-Van

Contains:

- Satellite Uplink (when stationary)
- LiveU Xtender mounted on the roof of the van, including LiveU Databridge and remote wireless connectivity options
- LiveU LU700-SV rack mount encoder
- One or more LU500 backpack mobile units

How it Works:

- Cameramen can use the LU500 backpacks to bring live video from as far as 1600ft (500m) away from the van by transmitting wirelessly back to the LiveU Xtender
- Footage can be uploaded to the studio while driving to and from the event scene
- LiveU DataBridge functionality provides the crew with a mobile hotspot for standard Internet use

LiveU is the leader in portable live video acquisition, contribution and management solutions. LiveU's award-winning technology enables live video transmission from any location around the world. From backpacks to smartphones, LiveU offers a complete range of devices for live video coverage. LiveU's solutions include multiple 4G LTE/3G, microwave, satellite and Wi-Fi cellular links, which are optimised for maximum video quality based on the available network conditions.
