

Distribute to Anywhere in the World

Internal and cross-organizational professional video distribution solutions for global broadcasters

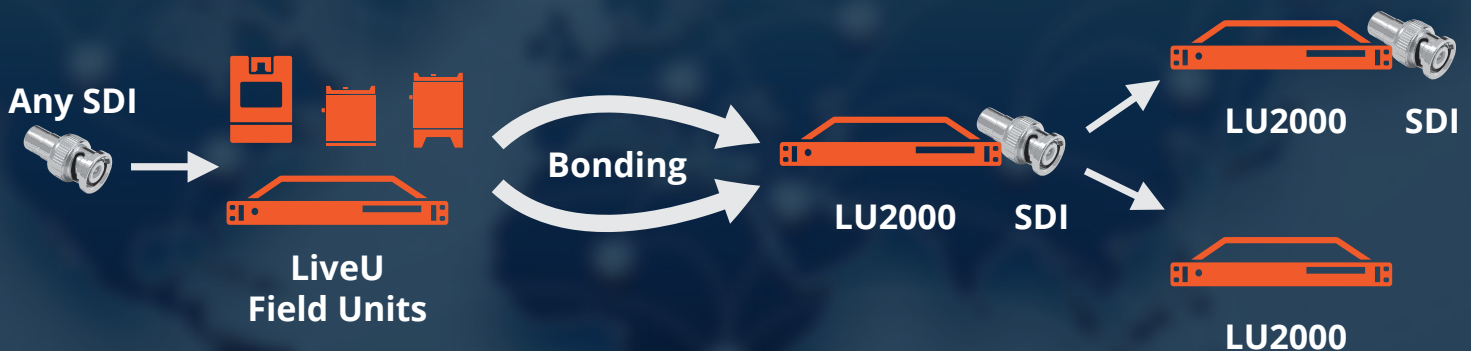

LiveU's range of end to end distribution solutions contain an encoder, decoder and transport system. Each model is fully integrated into the broadcasters existing LiveU hardware and the LiveU Central management platform, and is adapted to suit each organization's needs.

LiveU InterPoint

LiveU InterPoint is ideal for sharing live video with sister organizations and distribution to select points.

- **Adaptive video streaming** using LRT™ (LiveU Reliable Transport)
- **Supports inter-organization video sharing**
- **Based on existing HW** using LU2000 deployed server
- **Easy setup & operation** - based on LiveU Central; fast setup and familiar workflow
- **Low Delay** - .5 second end-to-end delay

LiveU MultiPoint

MultiPoint seamlessly integrates into users daily workflow, allowing them to share incoming live feeds with multiple end-points from within the same LiveU Central interface they work with daily.

- **Cost effective** solution over public internet for distribution of Live media to any destination
- **No additional Hardware** - based on existing LU2000 server
- **Integral part of LiveU Central** □ can be controlled from anywhere
- **Adaptive video streaming** using LRT™ (LiveU Reliable Transport)
- **Pay per usage** business model for maximum flexibility
- **Low Delay** □ 0.5 seconds per hop

Large Scale Distribution

LiveU MultiPoint allows for distribution of video with minimal delay for up to 100 concurrent destinations via the LiveU Cloud Distribution Server, without requiring additional bandwidth at the point of origin.
